

INSTALLATION INSTRUCTIONS FOR E90 Front Grille

Please excuse how dirty this car is in these instructions.

To install top part of grille, remove 3 screws using a torx bit on the bottom of each side.

To remove bottom part of grille you must release 7 clips. To release each clip, feel for the clip and press upwards on a small plastic part. Examine the replacement part to see what these clips should feel like and where they are located. Here are some pictures of removing these clips.

Once the clips are released simply pull the grille outwards towards yourself.

To install new grilles carefully align the tabs with the hole and push inwards until all clips are secure.
