

Thank you for purchasing
Bimmian.com Headlight Reflector Covers

- 1) Pre-installation Preparation: Before installing reflector covers clean application area with rubbing alcohol to remove all dirt and oil from lens surface and from the back of the reflector cover. If you have lens film applied to your headlight please keep in mind that we have not tested the reflector cover adhesive on any surface except the headlight surface. Adhesion may not be optimal when applied to other surfaces or films.
- 2) Dry fit reflector cover onto headlight to understand fitment.
- 3) Apply double sided tape liberally to perimeter of reflector cover as shown in the image below.
- 4) Firmly seat reflector cover onto headlight lens and press into place. Realigning the cover after it has been applied will not be possible without removing it. If that is required you will need to reapply new adhesive to the reflector cover to ensure full adhesion.
