

1. Jack up the car.

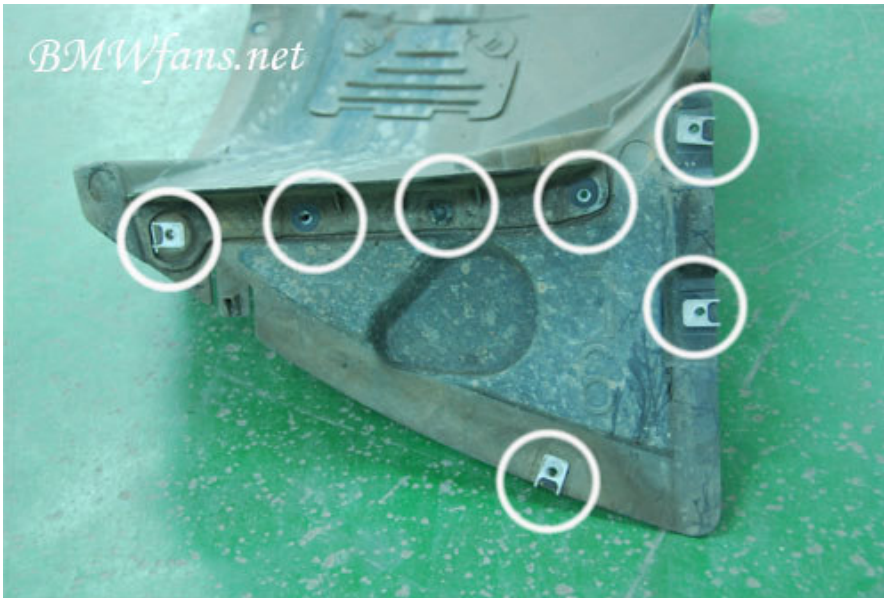

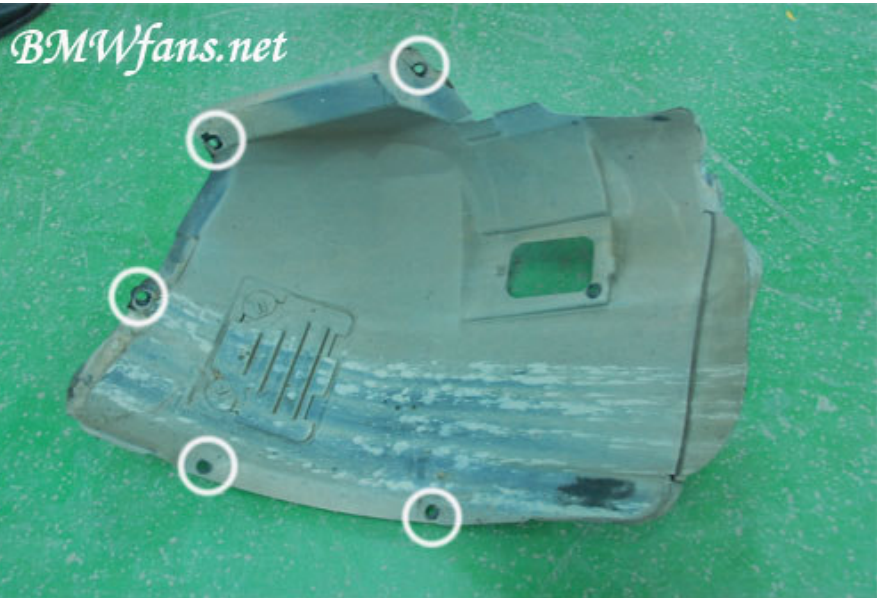

2. You can change bulb from here. Open this window, here is the position of parking light bulb. But this is more difficult because of limited working space.

3. Taking off the whole piece cover will make the installation easier.

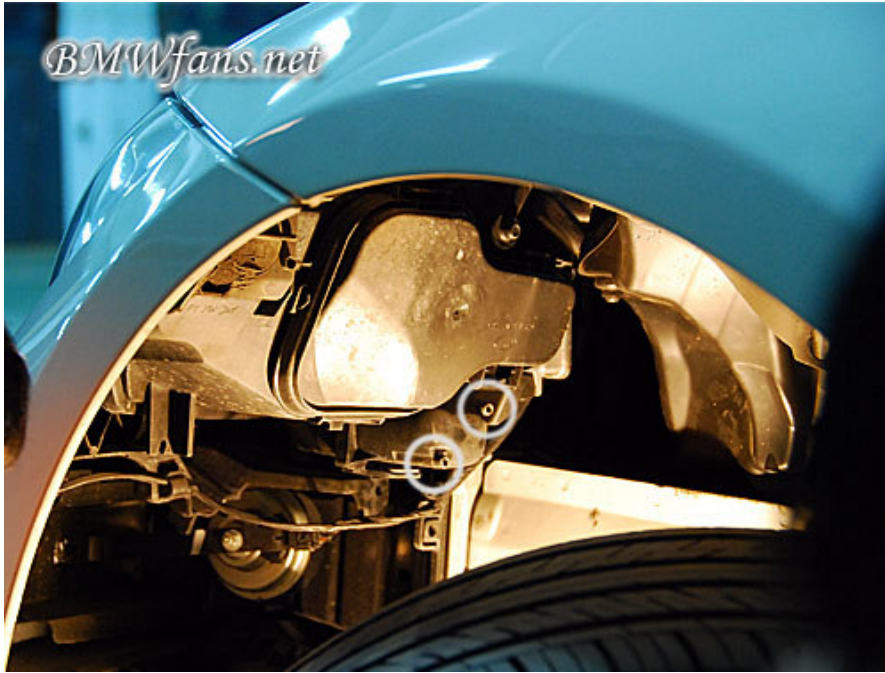

This is an up-side-down picture, to show you where the screws are to release.

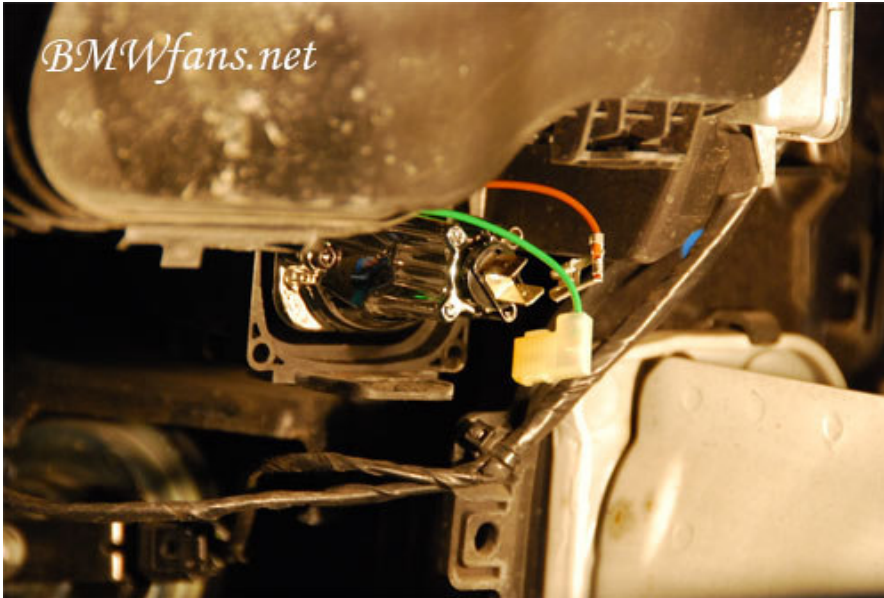

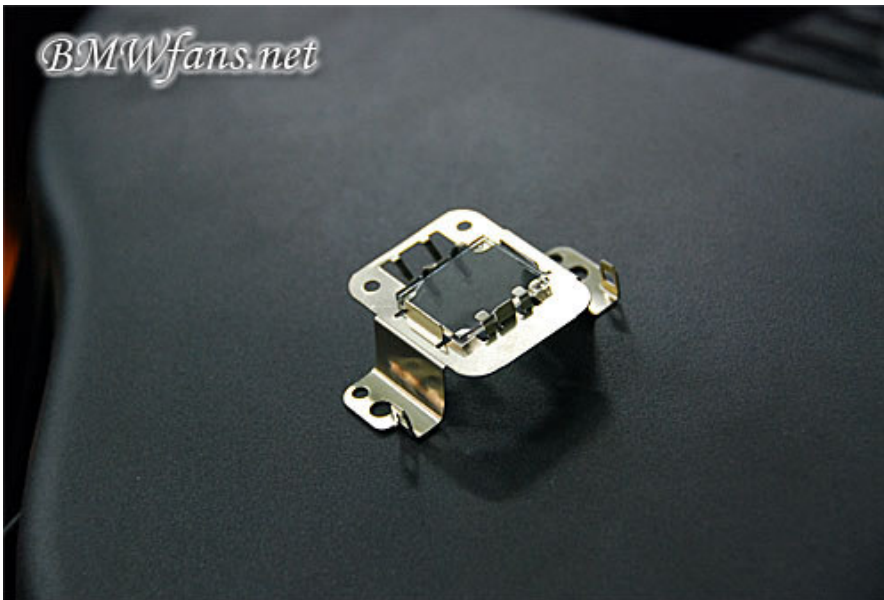

4. Open this cap.

5. Here is the parking light bulb. Release the screws and take the OEM bulb out.

6. The small plate must be removed.

7. Put the led marker with this plastic case together.

8. Then install the LED marker, fix with screws.

9. Here are some pictures showing you the OEM amber color and after installing super white light LED.
